

I am assuming u have all the basic things required to run a react app

1. I am zipping the folder with node_packages too if any errors rise,Follow these steps
2. Just create a new react app on your side.
3. Now copy the src and public folder and replace the files from “app” folder
4. Now copy json folder to separate new folder
5. Run terminal with json folder first, navigate to json folder in terminal
6. Run command “json-server --watch db.json port 3000”
7. Now run another terminal and navigate to app folder
8. First install the following packages
 1. Axios - “npm install axios”
 2. React-router-dom - “npm install --save react-router-dom”
 3. React-router - “npm install --save react-router”
9. Run npm start
10. The app is ready to use
11. In case of bootstrap problems copy the link in index.html or include bootstrap 3 links
